

Naresh Khatri

Senior Full-Stack Engineer | India | Open to Remote (Worldwide)

naresh.khatri2345@gmail.com | nareshkhatri.site | github.com/Naresh-Khatri | linkedin.com/in/naresh-khatri

SUMMARY

Full-stack engineer who ships production-grade, multi-tenant platforms end-to-end as a solo builder. Strong in TypeScript across React/Next.js and Node, distributed and real-time systems, and applied AI (agentic LLM integration), owning architecture and infrastructure from first commit to deploy.

EXPERIENCE

Full-Stack Developer Dec 2024 – Present
OmniNexus Sdn Bhd Remote

- Built a custom in-house image editor from scratch, eliminating \$4.8K/year in third-party SaaS costs.
- Architected async job queues processing 1,000+ AI tasks daily with retry/backoff reliability guarantees.
- Optimized the media-delivery pipeline, cutting asset load times by 40%; shipped features end-to-end from spec to production.

Freelance Full-Stack Developer Apr 2022 – Dec 2024
Self-employed Remote

- Built landing pages, dashboards, CMS platforms, and internal tools for clients, turning manual Excel-driven workflows into clean, maintainable web apps.

SELECTED PROJECTS

Multi-Tenant Commerce Platform (StoreKit) | Next.js, tRPC, Drizzle/Postgres, Cloudflare Live
A Shopify-class, multi-tenant platform where merchants sell across 4 commerce verticals, online and in-store.

- Built a Shopify-class multi-tenant commerce platform solo: a Turborepo monorepo of 6 apps (dashboard, storefront, headless API, customer + POS mobile) on a 54-table schema and 33 type-safe tRPC routers, across 4 verticals: e-commerce, food delivery, quick-commerce, and digital goods.
- Building an AI storefront generator: an LLM writes storefront code in isolated container sandboxes behind a type-check/lint gate, then deploys each store as its own Cloudflare Worker via a queue-driven pipeline with auto-rollback.
- Designed an order state-machine across the 4 verticals with illegal-transition guards, plus a typed event bus and per-store plugin registry so stores customize order lifecycle without touching core code.

Collaborative Coding & Practice Platform (Coding Ducks) | Next.js, tRPC, Y.js, Postgres Live · Code
LeetCode-style problems, a multiplayer CodePen, and a system-design simulation game, on a self-hosted code-execution engine.

- Built CD Judge, a Judge0-class code-execution engine for 10 languages: an async submit→poll→verdict pipeline with per-language harness generation that injects test cases, parses typed args, and redacts hidden-test output.
- Built Ducklets, a real-time collaborative code editor on Y.js CRDTs and a standalone Hocuspocus WebSocket server: 50+ concurrent editors per room with live cursor presence and conflict-free merges persisted to Postgres.

Real-Time Multiplayer Quiz Platform (Gumbalup) | Next.js, tRPC, PartyKit, Postgres Live
Organizations run live, host-driven quiz games; players join by room code and compete on a real-time leaderboard.

- Built a server-authoritative real-time game engine on PartyKit (Cloudflare Durable Objects + WebSockets) for 1000+ concurrent players per game: in-memory state machine, speed/streak scoring, deterministic leaderboards, team mode, and graceful reconnect/replay.
- Designed a secure edge-to-DB boundary where the edge worker proxies all persistence through a shared-secret internal API, keeping Postgres off the public internet; plus AI quiz generation (Groq/Llama) from topics or PDFs.

Also built Waku ([Live · Code](#)), an open-source dynamic image-generation service: a Satori/Resvg/sharp render pipeline behind a versioned, immutable URL contract, with a from-scratch Canva-like editor and SSRF-hardened image proxy.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, SQL, Python, HTML/CSS
Frontend	React 19, Next.js (App Router/RSC), React Native/Expo, Tailwind CSS, Zustand, TanStack Query
Backend	Node.js, tRPC, Hono, Express, Drizzle ORM, Zod, WebSockets
Data & Infra	PostgreSQL, MongoDB, Redis/BullMQ, Docker, Cloudflare (R2/Workers/CDN), AWS, GCP, Turborepo

EDUCATION

B.Tech | Dr. K. V. Subba Reddy Institute of Technology (affiliated with JNTUA) 2023
